

Jupyter Notebook Installation Guide:

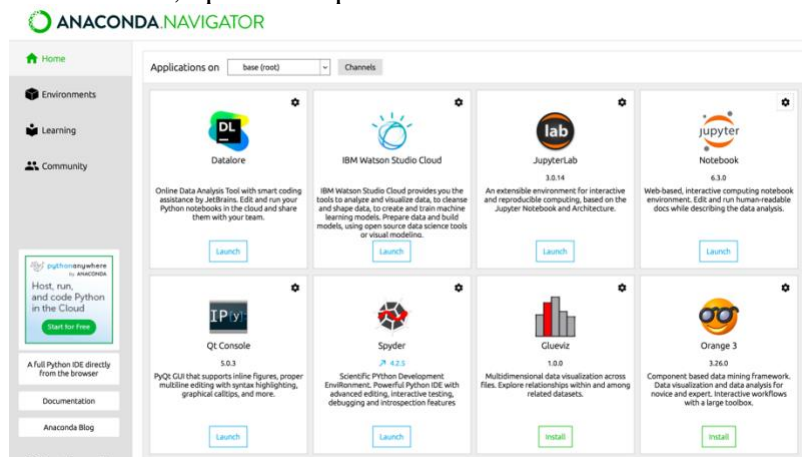

1. You can access Jupyter Notebook through your browser <https://jupyter.org/try-jupyter/lab/>
2. Another way, that is recommended for this is class is using “Anaconda”
 - Please download Anaconda from: <https://www.anaconda.com>
 - Go to <https://github.com/mona2442/Data-Analytic-Module>

- Under the code section, download the zip folder and extract the folder.

- In Anaconda, open the Jupyter notebook!

- Open the [Plotting folder](#)

- Open the plotting folder/ First note! This is the guide to how to do basic plotting using the Python!
- A few notes on using the Jupiter notebook:

1. New notebook: Go to File/ New Notebook/ Python 3
2. By selecting the dropdown menu/ select Markdown (when you are typing words), code, etc.!

3. It is as simple as adding new block by +
4. All the blocks work on sequence so when you are importing a package on top of your file, or defining a dataset, it will apply to the future blocks when you run your code!
5. You can find more detail using: [Jupyter Notebook Tutorial pdf](#)
